

# Selective collection in multi-family building

Paper and packaging waste

# Initial Challenge – long history

- ▶ Packaging waste: Paper & Cardboard (P&C), Glass & Metal (G&M), Plastic
- ▶ From the budget 1995: “The waste agency should work for waste reduction and recycling” and “ The Oslo model should be introduced in Oslo south” (door to door collection of P&C). Roll out finished in 1998
- ▶ Oslo’s door to door collection went from one bin with all kind of waste - to a “two bin system”
  - Bin 1 residual waste. Waste fee depends on bin size of residual waste
  - Bin 2 (P&C) is free of charge
- ▶ Budget targets in 2006 for G&M. “90% of households should have less then 300 meters to a recycling point (rp) in 2009”. 2006 – 462rp /2009-616rp/2018-1022rp
- ▶ In 2009 started door to door collection of Plastic packaging and Food waste. Roll out finished in 2012.
- ▶ Oslo continued with the “two bin system” in addition to a increasing number of recycling stations (11 small and 4 large)

# Practice - today

## Door to door - Bin 1

- Food waste – green bag
- Plastic – blue bag
- Residual waste – shopping bag

## Door to door - Bin 2

Paper & Cardboard mixed

## Recycling point Glass & Metal

The quantity that is NOT part of the EPR scheme
